Areas of expertise

Financial Crime prevention

The most numerous talent pool with qualified employees who are skilled and equipped with needed tools to design and perform AML processes.

Finance

Highly professional team that ensures robust financial health, strategic planning and regulatory compliance to enhance operational efficiency and secure financial stability.

Data & Analytics

Acting as trusted advisors, the team leverages advanced data modelling and cutting-age analytics do drive strategic decision-making and proactively manage business performance.

Technology & Security

Area which gathers extremely talented IT & Security engineers and skilled specialists. Tasks of the team include infrastructure and application lifecycles in conformance with the specified requirements of the Bank and in compliance to Security Policy.

Risk

Our experts enable effective risk management for the Bank and promote purpose-led intelligent risk-taking culture.

Change Management

With a current focus on innovation and future readiness experts in this area offer end to end support in driving change: from identifying and implementing solutions to assuring their security.

Within all these areas of expertise there we run research and development (R&D) projects delivering innovative business solutions and tax benefits

Zoom at **Financial Crime**

Area specialising in Financial Crime prevention has more than 900 qualified, experienced and recognised on the market employees design and perform robust AML processes.

Customer Due Diligence

With a solid AML knowledge our experts are proficiently prepared to build a complete customer profile by performing Know Your Client and Customer Due Diligence processes, transactions analysis, adverse press monitoring, source of wealth analysis, processing of Publicly Exposed Persons and executing Exit. Through continuous training, maintaining up-to-date industry knowledge, adhering to changing regulatory environment and utilizing latest technology, CDD teams support a strong controls framework to protect our customers and the organisation from money laundering and terrorist financing risks.

Transactions Monitoring

One of the newest areas of expertise within the Financial Crime Hub is Transaction Monitoring Team which is responsible for investigating suspicious activity or customer behaviour that could suggest money laundering or terrorist financing and reporting to the National Crime Agency (NCA) on behalf of the Nominated Officer across all brands in the UK & Ireland. Team's investigations may also be used to support exit from the Bank for the customer where appropriate.

CDD Design & Delivery

Huge AML expertise and good understanding of technology governance enabled us to create outstanding team of experts which is responsible for design of CDD processes and tools in our organisation. Their main aim is to analyse, assess and deliver projects and change initiatives. The unit combines expertise, precision, and innovation to ensure the highest standards of services .

 Data & Business Analyst in Finance Change

 Project Manager in Finance Change

Zoom at **Data & Analytics**

Data Analytics & Insights

Data teams focus on delivering the data agenda for the organisation, including projects related to bank's General Ledger, data warehouses, Business Intelligence and customer decision systems. The variety of tasks involves ETL processes as well as providing insights. These diverse projects combine analytical skills, technical expertise with business acumen.

Advanced Analytics & AI

Due to undoubtedly meaningful transformation of data science which is a result of AI development, our colleagues also demonstrate expertise in this area. They build and train machine learning models and integrate AI models into business workflows or software applications. Continuous monitoring of the performance of deployed AI models let us ensure that they remain accurate and refine them if needed.

Statistical Modelling

The main objective of the Scenario Modelling data science team is to build and run statistical / econometric models in order to project the bank's balance sheet and income stream. The projections can be run against any macroeconomic scenario ranging from Base, Stress and ah-hoc assumptions.

- Ability to identify and resolve issues with minimum supervision.

Zoom at: **Financial Crime Quality Assurance Specialist**

Role overview:

Quality assurance of comprehensive Customer Due Diligence, Transaction Monitoring, Exit alerts reviews and conducting Quality Assurance discussions.

Expertise:

- Financial Crime QA experience
- Internal policies & procedures adherence
- QA findings identification
- Compliance with regulatory requirements
- Evaluation of the adequacy of controls to identify any potential risks to the business

Average years of experience:

70% of Specialists have 5+ years of experience in Anti Money Laundering and Counter Terrorist Financing.

Commonly certified with **ICA Advanced or ICA Diploma.**

Role specific knowledge & skills:

- Deep knowledge of internal policies, regulations and procedures.
- Wide experience in Stakeholder management across multiple functions.
- Excellent analytical and problem-solving skills.
- Understanding of risk assessment and scenario analysis methodologies.
- Holistic risk based approach

Talent pool: c 40

Mostly experts

Availability: end of Q2 2025

Zoom at: **Financial Crime Quality Assurance Specialist**

Responsibilities/tasks:

- Reviewing the work of Operations and Quality Control (QC) to ensure compliance with policies and regulations. This includes assessing cases using test scripts and a holistic, risk-based approach. By leveraging extensive knowledge in Financial Crime Prevention, Anti-Money Laundering, Sanctions, and NatWest policies and procedures, as well as customer-specific regulations, QA provide expertise and feedback. The goal is to ensure that processes meet the expected standards, aligning with policy requirements, financial crime risks and risk appetite levels.
- Contribute to the development of guidance notes and training material and content, up-skilling the broader first line of defence function and businesses.
- Build and maintain trusted working partnerships across the organisation and franchises to inform and gather intelligence on emerging and future risks and controls.

Examples of project experience:

- Quality Assurance staff is responsible for identification and escalation of process gaps and recurring findings to minimise errors, impose correct procedures and maintain high level of quality.
- QA Specialists are experienced in identifying areas and proposing steps for improvement leading to increased efficiency and effectiveness of the processes.
- This role also requires close cooperation with various areas of the Bank, to help achieving One Bank standards, in order to keep consistency and similar levels of requirements between different Customers and products within processes.

Technical skillset:

- Familiarity with Financial Crime concepts and international regulatory requirements.
- Commonly certificated in Anti-Money Laundering (ICA Advanced, Diploma, and/or Correspondent Banking).
- Proficiency in data management and MI delivery.

Capabilities/Soft Skills:

- Experience in influencing others and maintaining ongoing relationships with customers/stakeholders.
- Ability to identify and resolve issues with minimum supervision.
- Excellent communications and change ready skills.
- Ability to work in fast pace environment.
- Deep knowledge of internal policies and procedures.

Zoom at: **Financial Crime Subject Matter Expert**

Role overview:

Acting as process expert to support of relevant department in queries, data analysis, risk issues raising and problem solving. Specialised in process design ensuring compliance and efficiency of Financial Crime prevention.

Expertise:

- Financial crime analysis & quality control
- Decision support, MI reporting
- Escalation, risk issue raising
- Liaising with variety of Bank's divisions

Commonly certified with **ACAMS, ICA Advanced or ICA Diploma**

Role specific knowledge & skills:

- Deep understanding of internal policies and regulatory requirements.
- Excellent knowledge of financial crime concepts and international regulatory requirements.
- Strong problem solving skills.
- Outstanding data literacy

Talent pool: c. 100

Mostly Experts (5+ years of experience)

Availability:

phased across 2024 and 2025

Zoom at: **Financial Crime Subject Matter Expert**

Responsibilities/tasks:

- Cooperation with a wide range of internal and frontline teams to support building a complete customer profile through Onboarding, Event Driven and Periodic Reviews by performing Know Your Client and Customer Due Diligence processes, transactions analysis, adverse press monitoring, source of wealth analysis, processing of Publicly Exposed Persons and executing Exit.
- Due to flexibility of the role, Financial Crime Specialists are versatile and able in all parts of their relevant processes allowing them to create, amend, escalate, and raise risks and changes around internal procedures, AML Policy, queries from CDD Analysts and much more ad-hoc tasks as required by Business and Management Team.
- Employees in this role are also responsible for training, coaching, shadowing, business presentations and other ways of passing knowledge over the process.
- Subject Matter Experts (SMEs) are also responsible for day-to-day assistance as decision support and overall process related queries for Financial Crime Analysts, Business, Compliance and Management Team.

Examples of project experience:

SMEs support decision making, escalation process, procedure changes, policy interpretation and raising of issues and process change requests.

SMEs are the first point of contact for the purpose of Change driven projects such as system migration, process change, policy amendment etc.

Technical skillset:

- Deep knowledge of internal policies and procedures.
- Familiarity with Financial Crime concepts and international regulatory requirements.
- Commonly certificated in Anti-Money Laundering (ICA Advanced, Diploma, and/or Correspondent Banking; ACAMS).

Capabilities/Soft Skills:

- Influencing other and maintaining ongoing relationships with key clients.
- Planning and organisational capabilities.
- Ability to identify and resolve issues without supervision.

Zoom at: Product Owner / Business Analyst

Role overview:

Product Owners and Business Analysts focus on designing Fin Crime Prevention architecture and processes in alignment with organisation's vision and goals. They work on defining the product's features, scope and functionalities, representing end-user and customer to the development team.

Expertise:

- Background in Financial Crime Prevention
- Practical knowledge of Agile and Scrum practices in SAFe framework
- Exposure to leading market trends in Fin Crime Prevention, incl. Implementation of Perpetual KYC model, Entity Resolution networks, PEGA Workflow solutions et al.
- Implementation of end user developed automations

Role specific knowledge & skills:

- Stakeholder management
- Backlog refinement and prioritization
- Requirements elicitation and production of design documentation (BRD, user stories et al.)
- Data analysis
- Problem-solving and creative design thinking
- Practical knowledge of Agile, incl. Scrum ceremonies participation and facilitation, use of JIRA and Confluence
- Practical knowledge of VBA and Python based automations

Average years of experience:

80% of staff have 5+ years of experience in Anti Money Laundering and Counter Terrorist Financing

50% of Staff have 5+ years of experience in Change Management

Commonly certified with ICA Advanced or ICA Diploma, APMG AgileBA, SAFe POPM 6.0, Prince2

Talent pool: c.20

Mostly experts

Availability: Q2-Q3 2024 (ca. 20 employees)

Zoom at: Product Owner / Business Analyst

• Responsibilities/tasks:

- Cooperation with a wide range of internal and external stakeholders, both business and technical
- Requirements elicitation and documentation of those in formal design artefacts such as BRD and user stories
- Undertaking ad-hoc data interrogation and analysis to support decision-making and design processes
- Backlog refinement and prioritization
- Project progress tracking and reporting
- Supporting test scoping, preparation, execution and acceptance

Examples of project experience:

Design and ongoing development and maintenance of CDD In-Life Monitoring solution (incl. Customer Exit process),
Transition of processes between teams and locations with track record of standing-up operational teams and processes from the ground up.

Technical skillset:

- Knowledge of internal policies and procedures
- Familiarity with Financial Crime concepts and international regulatory requirements
- Application of Agile methodologies and Business Analysis best practices
- Knowledge of technical solutions used to manage Fin Crime architecture (big data, CRM workflows, rule based decisioning engines)

Capabilities/Soft Skills:

- Comply with the business-wide governance framework, as well as influencing cost management decisions through the provision of commercial and financial expertise.
- Deliver finance initiatives and projects, drawing actionable business insights from financials, developing and matching solutions to meet business needs.
- Developing and maintaining professional, effective relationships with customers, stakeholders and employees at all levels.
- Building a culture of continuous improvement, leading by example and encouraging idea generation.

Technical skillset:

- Knowledge of budgeting, forecasting and financial modelling.
- Good commercial and business acumen.
- The ability to understand multi-banking products.
- Advanced experience in Microsoft Office applications.
- Tableau and Power BI user Experience.

Capabilities / Soft skills:

- Excellent analytical and problem-solving skills.
- An appetite for detail and delivery orientation.
- Good stakeholder management skills, including building and influencing relationships.
- Planning and organisational capabilities.

Zoom at: Data & Business Analyst in Finance Change

Role overview:

Data Analysts and Business Analysts in Finance Change play a crucial role in driving financial transformation projects by combining in-depth financial expertise with advance data analysis and business analysis capabilities. This role is essential for aligning business objectives with tech solutions and ensuring that financial systems and processes meet evolving regulatory and business requirements.

Expertise:

- Business analysis, documenting and managing business requirements by ensuring alignment between Finance teams and technical expectations
- Supporting designing, testing and implementation of new solutions, ensuring system changes meet business requirements and regulatory and business needs
- Supporting transformation with in-depth knowledge of Finance and technology
- Managing and facilitating change and transformation projects
- Stakeholder management and communication

Role specific knowledge & skills:

- Finance and accounting principles, knowledge of financial products
- Familiarity with financial regulations
- Business process modelling and process flows
- Scrum methodology, Agile principles
- Jira, Confluence, Kanban, Leankit
- Proficiency in requirements gathering (BRDs)
- Technical skillset: SQL, Python, Tableau, AWS

Education:

- Master's degree in Finance, Accounting or technical majors
- Supplementary on-job trainings in programming languages and new technologies such as AI, cloud services etc.

Talent Pool: 20

Experience: All levels- Foundation, Professional, Expert, Leaders

Availability: Q1 2025

Certification:

- professional financial and accounting qualifications: **CFA, ACCA or CIMA**
- **Scrum Master & SAFe certifications**

Zoom at: Data & Business Analyst in Finance Change

Responsibilities / tasks:

- Working on finance transformation projects aimed at digital transformation, improving data accuracy, and streamlining financial reporting
- In-depth analysis to gather and document requirements for transformation projects in Finance, creating Business Requirement Documents
- Translating the requirements into technical specifications with usage of Finance knowledge to align with financial and accounting principles
- Analysing current systems, processes, data and process flows to identify inefficiencies or gaps, and proposing solutions for optimization
- Analysing datasets to support project decisions; using Finance and technology skillsets to set direction of changes in transformation projects
- Cooperating closely with Finance, Data & Analytics, Technology, Business Stakeholders, managing stakeholders' expectations, ensuring alignment of actions with project objectives, timelines and deliverables
- Supporting regulatory-driven changes by ensuring Finance meet evolving regulatory standards
- Governance over data integrity across financial systems: identifying and resolving discrepancies, ensuring compliance with internal and external standards
- Acting as a liaison between Finance and IT teams during the implementation or upgrade of financial systems, ensuring seamless communication and common understanding among all stakeholders
- Designing and developing dashboards, reports, data marts and new data flows to help Finance with digital transformation of their processes
- Facilitating creation of new financial data streams and data solutions, validating accuracy, consistency and alignment with existing financial systems
- Assessing impact and risks of transformation projects, recommending mitigation solutions
- Ensuring smooth transitions for finance teams when implementing new systems or processes by supporting testing and deployment
- Conducting post-implementation reviews to ensure that system changes and finance transformations deliver the intended benefits, and troubleshoot any emerging issues
- Project management skillset: Agile methodology, proven ability to lead project streams and executing EPICs/tasks, driving change and mitigating delays in project timelines

Examples of project experience: Implementation of new financial reporting systems, reports and data flows to meet regulatory requirements (Basel III, EU Taxonomy, FRC, Climate Reporting), automation of manual reconciliation processes, reducing errors and data quality issues, data migration projects during system upgrades, re-working operating models to achieve synergies, developing dashboards to track and flag issues, designing and creating new solutions and frameworks to adapt to new regulatory requirements.

Technical skillset:

- Knowledge of finance systems architecture
- Understanding programming languages (Python, SQL)
- Visualisation tools such as Tableau
- Collaboration tools: Jira, Confluence, Kanban, Leankit
- Process Modelling Tools like Appian, Visio, Blueworks
- Knowledge of financial instruments and derivatives
- SQL, Python
- Understanding of cloud services

Capabilities / Soft skills:

- Problem solving, critical and strategic thinking
- Effective communication
- Strong ability to work in a team
- Adaptability to change and flexibility
- Attention to detail, strong analytical skills
- Time management and multitasking
- Proficiency in stakeholder management, including building and influencing relationships

Zoom at: Project Manager in Finance Change

Role overview:

Project Manager in Finance Change is a role focused specifically on leading and delivering Finance transformation projects. Unlike general project managers, this role requires a deep understanding of both financial processes and digital transformation strategies, making it highly unique. This role is essential for transforming Finance function through strategic project management, advanced technology, and improved financial operations, making it a strategic partner in the organization's growth and efficiency.

Expertise:

- Proven ability to lead and manage large-scale finance transformation projects, driving improvements in key areas such as financial reporting, budgeting, forecasting, and compliance
- Ability to identify, assess and mitigate risks specific to finance projects, such as delays in reporting or system vulnerabilities
- Proficient in applying Agile methodology specifically to Finance projects
- Expertise in managing project budgets and performing cost-benefit analyses to ensure Finance transformation initiatives deliver measurable financial returns and improve operational efficiency
- Expertise in navigating finance teams through significant organizational change, from system implementations to process re-engineering

Education:

- Master's degree in Finance, Accounting, Economics or other

Certification:

- Scrum Master & SAFe certifications

Role specific knowledge & skills:

- Hands-on experience with project management tools such as Jira, Confluence, Kanban, Leankit
- Agile principles
- Deep Finance knowledge
- Understanding of finance functions, financial processes, and regulatory requirements
- Budget and cost management
- Resource allocation, expenditure tracking against forecasts
- Creating and maintaining comprehensive project documentation

Availability: Q1 2025

Zoom at Data & Analytics roles

Zoom at: **Data Analyst**

Role overview:

Contributing to the analysis of complex data to identify business issues and opportunities. Playing a key role in supporting the delivery of high-quality business solutions.

Expertise:

- Delivering top-notch analysis to develop and implement innovative processes and solve problems
- Undertaking analysis of data to identify business issues and opportunities
- Translating data and insights for key stakeholders
- Delivering data analysis in a technology or IT function
- Streamlining data using key systems and tools
- Delivering research based on qualitative and quantitative data across a range of subjects data across a range of subjects

Technical Competencies:

Programming Languages: Python, R, SQL

Data Management: ETL processes, data cleaning, normalization

Data Visualization: Tableau, Power BI

Database Systems: Snowflake, Teradata, SQL Server

Role specific knowledge & skills:

- Business analysis tools and techniques
- Knowledge of data architecture, key tooling and relevant coding languages
- Financial Services knowledge
- Data analysis tools
- Advanced Analytics
- Foundation knowledge of data engineering, data science and decisioning disciplines
- Core technical skills

Talent pool: ~30

Split per experience : Mostly Experts

Availability: phased across 2024 and 2025

Zoom at: **Data Analyst**

Responsibilities/tasks:

- Collecting, profiling and mapping appropriate data to use in new or existing solutions as well as for ongoing data activities.
- Identifying and documenting data migration paths and processes, standardising data naming, data definitions and modelling.
- Helping to interpret customer needs and turning them into functional or data requirements and process models.
- Building and maintaining collaborative partnerships with key business stakeholders.
- Providing high quality analytical input to help develop and implement innovative processes and resolve problems across the bank.
- Honing your data analysis expertise and gaining valuable experience in a dynamic area of our business.
- Capturing, validating and documenting business and data requirements, making sure they are in line with key strategic principles.

Examples of project experience:

A background in delivering research based on qualitative and quantitative data across a broad range of subjects.

Technical skillset:

- ETL technical design
- Data quality testing
- Cleansing and monitoring
- Data sourcing, exploration and analysis
- Data warehousing and data modelling capabilities
- SQL, Python, Tableau, OBIEE, advanced Excel

Capabilities/Soft Skills:

- Critical Thinking: Objectively analysing and evaluating complex problems
- Communication: Distilling complex data into clear, accessible language
- Problem-Solving: Agile in identifying and resolving issues
- Collaboration: Working well with diverse teams and stakeholders
- Analytical Thinking: Methodically extracting conclusions and identifying patterns
- Leadership: Guiding and mentoring junior analysts

Zoom at: **Data Engineer**

Role overview:

Carrying out data engineering tasks to build, maintain, test and optimise a scalable data architecture, as well as carrying out data extractions, transforming data to make it usable to data analysts and scientists, and loading data into data platforms.

Expertise:

- Extracting value and features from large scale data
- Development of comprehensive knowledge of the organisations data structures and metrics
- Building streaming data ingestion and transformations solutions

Technical Competencies:

- **Programming Languages** :Python, PySpark, SQL, NoSQL, SAS 4GL, Scala
- **Programming Software**: StreamSets, AWS & Airflow SDK
- **Data Warehouse**: Snowflake, Teradata, Oracle, SQLServer
- **Data Pipelines Development**: StreamSets, Airflow, SAS DI
- **Orchestration & coding**: Autosys, Airflow

Role specific knowledge & skills:

- Knowledge of modern code development practices
- Knowledge of data & software engineering fundamentals
- programming languages
- ETL technical design; data quality testing, cleansing and monitoring; data sourcing, exploration and analysis; and data warehousing and data modelling capabilities
- Cloud adoption
- Developing data processing according to big data concept
- Processing of all types data eg. unstructured data
- Building automate tests & production implementation

Talent pool: ~10

Split per experience: Mostly experts

Availability: phased across 2024 and 2025

Zoom at: **Data Engineer**

Responsibilities/tasks:

- Developing comprehensive knowledge of the bank's data structures and metrics, advocating change where needed for product development.
- Practicing DevOps adoption in the delivery of data engineering, proactively performing root cause analysis and resolving issues.
- Collaborating closely with core technology and architecture teams in the bank to build data knowledge and data Solutions.
- Developing a clear understanding of data platform cost levers to build cost effective and strategic solutions
- Sourcing new data using the most appropriate tooling and integrating it into the overall solution to deliver for our customers.
- Participating actively in the data engineering community, delivering opportunities to support the bank's strategic direction while building a network across the bank.

Examples of project experience:

Contributing to the analysis of complex bank, franchise or function data to identify business issues and opportunities. Playing a key role in supporting the delivery of high-quality business solutions.

Technical skillset:

- ETL technical design,
- Data quality testing, cleansing and monitoring,
- Data sourcing, exploration and analysis,
- Data warehousing and data modelling capabilities,
- SQL, Python, Tableau, OBIEE, AWS Glue, Spark

Capabilities/Soft Skills:

- Attention to detail.
- Good communication skills with the ability to proactively engage with a wide range of stakeholders.

Zoom at: **Data Scientist**

Role overview:

Bringing together statistical, mathematical, machine-learning and software engineering skills to consider multiple solutions, techniques and algorithms to develop and implement ethically sound models end-to-end.

Expertise:

- Interpreting data with specialized software tools
- Selecting the right statistical tools
- Using data to solve business problems from hypotheses through to resolution
- Synthesising, translating and visualising data and insights for key stakeholders

Technical Competencies:

- **Programming Languages:** Python, PySpark, SQL
- **Machine Learning & Statistical Modeling:** Scikit-learn, TensorFlow, PyTorch, Supervised and unsupervised learning, Statistical analysis and hypothesis testing
- **Data Management:** Data wrangling and preprocessing, Feature engineering, ETL Processes
- **Data Visualization:** Matplotlib, Seaborn, Plotly
- **Big Data Technologies:** Apache Spark, Hadoop
- **Model Deployment & Management:** AWS services

Role specific knowledge & skills:

- Financial Services knowledge
- Statistical Modelling and Software
- Statistical tools and techniques
- Statistical data analysis such as linear models, multivariate analysis, stochastic models and sampling methods
- Machine learning techniques
- Big data technologies
- Using database and programming language and software engineering fundamentals
- Cloud applications, environments and options

Talent pool: ~20

Split per experience: Mostly Experts

Availability: 2025

Zoom at: **Data Scientist**

Responsibilities/tasks:

- Using data translation skills to work closely with business stakeholders to define detailed business questions, problems or opportunities which can be supported through analytics
- Applying a software engineering and product development lens to business problems, creating, scaling and deploying software driven products and services
- Working in an Agile way within multi-disciplinary data and analytics teams to achieve agreed project and scrum outcomes
- Selecting, building, training and testing machine learning models considering model valuation, model risk, governance and ethics, making sure that models are ready to implement and scale
- Iteratively building and prototyping data analysis pipelines to provide insights that will ultimately lead to production deployment
- actively participating in the data community to identify and deliver opportunities to support the bank's strategic direction through better use of data.

Examples of project experience:

The design and implementation of data science tools and methods, which harness our data to drive market-leading purpose customer solutions

Technical skillset:

- Programming language and software engineering fundamentals
- Cloud applications and options
- Exploratory data analysis

Capabilities/Soft Skills:

- Attention to detail.
- Good communication skills with the ability to proactively engage with a wide range of stakeholders.

Zoom at: **Technical Specialist**

Role overview:

Defining appropriate technical solutions for programmes and platforms with expertise to meet business requirements in accordance with business-wide change standards

Expertise:

- Providing high quality analytical input to support the development and implementation of innovative processes and problem resolution
- Defining appropriate technical solutions for programmes and platforms with expertise to meet business requirements in accordance with business-wide change standards

Role specific knowledge & skills:

- Specialist knowledge, such as domain or platform
- High quality technical analysis, design and delivery of technology solutions or components, including technical guidance, development, configuration and management services for technologies, platforms and
- Application of technical analysis tools and techniques

Technical Competencies:

- **Programming Languages:** Python- pandas, numpy, pyspark, SQL, VBA
- **Data Management:** ETL Processes, Data analysys
- **Data Visualization:** Tableau, OBIEE, AWS QuickSight
- **AWS Services:** Glue, Athena
- **Software:** advanced Excel, SAS

Talent pool: ~50

Split per experience : Experts only

Availability: 2025

Zoom at: **Technical Specialist**

Responsibilities/tasks:

- Capturing, validating and documenting technical requirements, making sure they are in line with key strategic principles
- Building, managing and maintaining a positive working relationship with stakeholders and third-party suppliers across multiple franchises and functions
- Utilising our standard processes by understanding the development lifecycles and minimum mandatory requirements
- Managing the application of and compliance with our change framework and standards, including the use of Agile methodology
- Articulating and quantifying technical impacts in a tangible manner, which allows stakeholders to make informed decisions
- Undertaking high quality technical analysis, design and delivery of technology solutions or components, including technical guidance, development, configuration and management services for technologies, platforms and products.

Examples of project experience:

Developing end-to-end solutions and translate problems and opportunities into high level solutions. Providing high quality analytical input to support the development and implementation of innovative processes and problem resolution.

Technical skillset:

- Analysis and management of relational databases
- Programming skills
- Cloud services and Big data
- Data analysis and management

Capabilities/Soft Skills:

- Attention to detail.
- Excellent communication and influencing skills.
- Knowledge of our change framework

Zoom at
Risk roles

Zoom at: **Financial Crime Oversight**

Role overview:

Support of Fin Crime Risk (FC) management through advisory, testing and monitoring, and leading financial crime risk assessment process for the Bank as well as escalations and Fin Crime standard updates.

- **Role specific knowledge & expertise:**
- Experience in a FC 2nd Line of Defence (LoD) & 1LoD Functions - commercial & markets business
- **Financial Crime Expert Advisory & Approvals** on high risk customers, transactions and exceptions to Policy
- **Financial Crime Oversight & Challenge** including business development of new products and services with adequate FC controls in place. Providing 2LoD Risk Opinions to Bank ExCo
- **Systems Oversight and Optimisation** –overseeing CDD and Transaction Monitoring systems
- **Enterprise Wide FC Risk Assessments**
- **Testing & Monitoring**
- **Policy Development and Implementation**
- **Transaction Monitoring & Suspicious Activity Report** for investment banking

Technical Skills & Certifications:

CAMS – Certified AML Specialist
ICA Specialist Certificate in Financial Crime Risk in Global Banking & Markets

Capabilities / Soft Skills:

- Good communication skills to provide proactive and effective challenge, as well as report writing skills.
- Good time management skills to manage competing priorities
- Ability to work collaboratively.
- Good stakeholder and relationship management skills including the ability to influence senior management
- A detail-orientated, organised, proactive, and responsible approach
- Good analytical skills to detect, challenge and report inadequate or ineffective FC controls.
- Ability to lead the business in implementing risk strategies

Zoom at: **Market Risk**

Role overview:

Provide reports and analysis allowing for monitoring and thorough understanding of the risks embedded in securities, closely cooperating with stakeholders in risk limits setting, portfolio stress testing and backtesting, processes automation, as well as in risk monitoring projects.

Role specific knowledge & expertise:

- Comprehensive knowledge of global financial markets, financial instrument, impact of market factors on asset prices and risk.
- Understanding of market risk theories and models, risk measurement and management techniques (e.g., VaR, RWA, sensitivity analysis)
- Market risk regulatory framework and standards knowledge (Basel III, and in particular FRTB).
- Proficiency in market risk management activities, including risk identification, measurement, monitoring (setting limits and ensuring that exposures remain within established limits, investigation and escalation any limit breaches to relevant stakeholders); reporting.

Technical Skills:

- Proficiency in quantitative methods, including statistical analysis.
- Programming skills (VBA, Python).
- Computer literacy (Excel, SQL).
- Ability to analyse large and diverse datasets.

Certifications: FRM / CFA.

Capabilities / Soft Skills:

- Strong problem solving and analytical skills
- Collaboration skills and stakeholder management.
- Process improvement & challenging status quo.
- Strong verbal and written communication skills.

Zoom at: Operational Risk

Role overview:

Delivering an effective and efficient operational risk framework, supporting a variety of functions including Front Office, Finance, Technology, COO – helping to identify operational risks but also provide remediation solutions, while working closely with 1st Line of Defence, Internal and External audit to improve the Banks control environment.

Role specific knowledge & expertise:

- Experience within 2nd Line of Defence (2LOD) within a Financial Institution or a 1LOD risk and control team.
- Understanding of risk management disciplines in financial services, and operational risk management techniques.
- Understanding of the regulatory environment pertaining to large, complex financial service organisations and an understanding of market conditions and how they could impact operational risks and practices.
- Understanding of operational risks relevant to key business activities undertaken in a financial services organisation.

Technical Skills:

- Computer literacy
- Tableau

Certifications: Operational Risk Accreditation, CISSP, Certificate in Global Business Services – Hackett Group

Capabilities / Soft Skills

- Proven ability in influencing and stakeholder management at all levels.
- The ability to consistently exercise sound and decisive judgement, strong communication and organisational skills
- Conflict resolution skills and ability to identify alternative solutions.

Zoom at: **Funding and Liquidity/Treasury**

Role overview:

Development and delivery of risk metrics and reporting activities which capture market and funding, and liquidity risks managed by Treasury. Providing insights & risk opinions for Treasury papers and activities to ALCo and Risk executives. Ensuring revision, oversight and regular liquidity reports, funding concentration, internal liquidity adequacy assessment process and Recovery Plan.

Role specific knowledge & expertise:

- Thorough understanding of a banking institution P&L, balance sheet, liquidity, funding and capital management.
- Understanding of financial products.
- Understanding of funds transfer pricing, ALM and IRRBB frameworks
- Knowledge of banking regulatory requirements in L&F area (Basel, EBA, PRA, KNF).
- In-depth understanding of stress testing end-to-end cycles.
- Deep understanding of financial risk concepts and principles.
- Developing/maintaining policies & procedures framework
- Review/development of regulatory deliverables including calculation tools (ALMM, measures, ILAAP)
- Understanding of risk metrics (e.g., LCR, NSFR, VaR, EVE, NII, RWA etc.).
- Knowledge of risk analytics tools and techniques, such as risk measurement methodologies, counterparty credit exposure modelling, derivatives modelling, balance sheet/capital modelling.

Technical Skills:

- Strong knowledge of mathematics and statistics
- Financial systems proficiency
- Computer literacy (SQL, Excel&VBA, Python, Tableau)

Capabilities / Soft Skills:

- Strong problem solving and analytical skills
- High level of independence
- Experience in presenting complex topics
- Attention to detail and connecting the dots from other areas
- Collaboration skills and stakeholder management
- Proven ability in influencing and stakeholder management at all levels

Zoom at: Quants Risk Modelling & Model Risk Validation

Role overview:

Both roles help to maintain the Bank's financial stability by managing model risk and validating the tools that drive decision-making in high-stakes environments. The **Quants Risk Modelling** specialists focus on Counterparty Credit Risk (CCR) modelling, perform simulations, modelling of collateral, and calculations of credit-related quantities such as Exposure at Default (EAD), and testing their output by setting up and analysing tests which modify their behaviour.

Model Risk Validation specialists are dedicated to validating complex derivatives pricing models across numerous products and asset classes, periodic model reviews, Additional Valuation Adjustments (AVA) calculations, regulatory model risk analysis and standards assurance, advisory on how model risk can be reduced or mitigated, ensuring that relevant risks are properly escalated. They are responsible for development of coding libraries for validation purposes.

Knowledge & expertise:

Specific to Quants Risk Modelling:

- Retail credit products, credit strategies and policies
- Credit risk portfolio management (2nd Line of Defence), portfolio performance tracking
- Bank risk appetite frameworks
- Understanding bureau data
- Knowledge of CCR, collateral modelling
- R&D analyses (Reg IM, collateral modelling)
- Statistical investigations (hypothesis testing, mathematics of backtesting)

Specific to Model Risk Validation:

- Initial, periodic and ad-hoc pricing models validations, periodic reviews
- Complex derivatives (SPD, Rates, xVA, Credit, FX, eFX) pricing methods
- Understanding mathematics at PhD level
- Oversight on model assurance activities performed by model development teams for organisation-wide pricing models
- Ensuring models are fit for purpose for their designated use
- Identification and communication of significant model risks

Technical Skills:

- Proficiency in programming languages such as Python, C++, SAS, latex, R programming for validation libraries building.
- Competence in Git and cloud solutions
- Experience with Machine Learning and AI techniques as applied to financial modelling and risk assessment.
- Strong analytical and numerical skills with the ability to work with large datasets and complex algorithms.

Certifications: FRM / CFA / PhD

Capabilities / Soft Skills:

- Analytical thinking
- Project management skills
- Stakeholder management
- Presentation skills
- Pioneering and high level of independence
- Strong verbal and written communication skills
- Working under time pressure & on unstructured tasks
- Adaptability

Zoom at: Credit Risk - Retail Credit Strategy

Role overview:

Providing a second line of defence oversight of Retail Credit products. Delivering regular reviews of credit risk policies and lending criteria, including score cut-offs setting, affordability assessment and income verification approach. Identifying emerging risk trends and threats via regular MI and ad-hoc analyses. Working with credit reference agencies and fintechs - assessing new data sources & bureau blocks to improve credit decisions and promote responsible lending. Coordinating implementation of agreed changes in decisioning systems.

Knowledge & expertise:

- Comprehensive knowledge of retail products (with a key focus on unsecured), credit risk strategies and policies
- Credit risk portfolio management (2nd Line of Defence), portfolio performance tracking, scorecards
- Affordability assessment, income verification
- Risk management framework, risk appetite
- Default rate modelling, risk-based pricing.

Technical Skills:

- Proficient programming skills (SAS, SQL, Python)
- Strong analytical and numerical skills with the ability to work with large datasets using quantitative methods (including statistical analysis and machine learning), problem solving
- **Certifications:** FRM / PhD (Physics) / Programming

Capabilities / Soft Skills:

- Managing diverse and extensive stakeholders network (1st Line of Defence, pricing, provisioning/IRB/IFRS9, credit reference agencies, regulators, external benchmarking, modelling, model risk, audit, fraud etc.)
- Line management & coaching
- Project management
- Strong communication and presentation skills – verbal and written

Zoom at Technology & Security roles

Zoom at: Software Engineer

Role overview:

Application of widely agreed software engineering principles and methodologies to design, develop, test and maintain architecture, applications, systems and services to achieve organisation strategy goals

Expertise:

- Developing whole software architecture ab initio (from scratch)
- Designing, developing, and maintaining database, intranet, web, desktop and MS Access/Excel applications
- Proficiency in core Concurrency concepts like threads, processes, synchronization and parallelism
- Database related knowledge (relational and non-relational)
- Ability to translate user requirements into functional, efficient solutions
- Effective collaboration and communication skills for business stakeholders while requirements gathering phases
- Experience of working in a very complex banking environment

Role specific knowledge & skills:

- FinTech domain knowledge
- Payment processing systems practical knowledge
- Financial Forecasting/Scenario Modelling
- AML & CDD processes Workflow and Quality Standards
- Knowledge and experience in Agile/Scrum methodology

Talent pool: c. 40

Mostly Professionals

Availability: Q4 2025

Zoom at: Software Engineer

Technical Competencies:

Languages & Frameworks:

Java (Spring, Spring Boot), JavaScript, C#, ASP.NET, Python (Django, Django REST Framework), SQL, PL/SQL, .NET, HTML, CSS, XML, XSLT, VBA, Powershell

Databases:

MongoDB, Oracle DB, PostgreSQL (Postgres DB), Microservices & Containerization, Microservices, Docker, Kubernetes, Kafka, Akka

Development Tools:

Visual Studio, VS Code, GitLab (including GitLab CI/CD), IntelliJ Idea

Data Analysis & Reporting:

MS Excel / Access VBA Apps, PowerPivot, PowerQuery, Power BI

APIs & Web Development:

Web API, RESTful API, JQuery, React

Other Technologies:

RPA / RDA (Robotic Process Automation / Robotic Desktop Automation), Entity Framework, LINQ, Tabulator, Razor

Zoom at: Security Specialist

Role overview:

Analyse, assess, triage and respond proactively and effectively to security related issues, threats, incidents, requests and events to defend assets, information, and systems from unauthorised access, use, disclosure, disruption, modification, or destruction. Use SME knowledge to support the organisation with risk identification, contributing to risk management processes to achieve business outcomes, while protecting the Customer.

Own & manage stakeholder relationships. Communicate & collaborate with internal customers of Security CoE, including suppliers and regulators.

Expertise:

- Ability to translate complex technical concepts clearly to peers and management level colleagues
- Understanding of the banks security policy & control requirements and to advice risk mitigation techniques to the business
- A good understanding of Agile Methodologies

Role specific knowledge & skills:

- A wide range of SME knowledge in a number of security related specialisms based on industry standards (SoGP/NIST/PCI)
- Strong security controls experience
- Consultancy and project management

Technical Competencies:

- A background of defining policy standards & controls
- Proficiency in assessing solution architecture designs supporting zero-trust
- An understanding of completing benchmarking to peers and industry standards
- Experience in risk management frameworks
- Experience in setting risk appetites

Talent pool: c.20

Mostly experts

Availability: Q4 2025

Zoom at: **Perimeter Security**

Role overview:

Perimeter Security Specialist/Consultant role holder will analyse projects design requirements, technical solutions or processes to identify network & infrastructure security related risks, and provide guidance on how they can be mitigated or managed effectively

Expertise:

- Analyse projects requirements, technical solutions or processes to identify security related risks, and provide guidance on how they can be managed effectively through either technical or non-technical solutions
- Offer advice & guidance regarding secure design & Security Policy Compliance
- Support the wider bank culture of continuous improvement and collaborating with others, focusing on automation, virtualisation and scalability by incorporating security as early as possible (shift-left approach)
- Supporting with the identification of risks, while contributing to risk management strategies to achieve business objectives and customer outcomes, making sure that decisions made are based on robust data
- Display proven background of defining policy controls plus analytical and problem-solving skills with understanding of security assessment processes

Technical Competencies:

- Proficiency of a network security and micro-segmentation – on-prem and Public Clouds
- LAN/WAN and VPN networking has firewalling experience
- Defining policies and standards
- Service & e2e process ownership

Knowledge & Skills

- Agile methodologies with the ability to write technical issues in business terms
- Proficiency through relevant certifications in the area of on-prem and Public Cloud Network Security (supporting the zero-trust approach)
- Building and leveraging relationships with colleagues across the bank and third parties
- Stakeholder management
- Data literacy, analytical & problem solving skills

Talent pool: c. 10

Mostly experts

Availability: Q4 2025

Zoom at: **Application Support Engineer**

Role overview:

Maintaining applications. Building relationships with internal and external stakeholders. Acting as a point of customer contact and first or second level of support. Vendor management.

Expertise:

- Supporting complex group-wide strategic, high availability systems like General Ledger, ERP, HR Payroll and various payment processing applications.
- Systems Integration.
- Database and programming related knowledge.

Technical Competencies:

- Advanced knowledge of one or more service management disciplines such as request fulfilment, user access management, incident, problem, change IT, continuity or capacity management (ITIL).
- Knowledge and experience in agile methodologies – Kanban, Scrum and SAFe.
- Technologies: Wintel, Linux, Oracle SQL/PLSQL, AS/400
- Tools: Jira, Agileplace, ServiceNow,

Role specific knowledge & skills:

- Banking domain knowledge.
- Experience working in a very complex banking environment.
- Service and customer-oriented attitude.
- Excellent understanding of audit, risk, regulatory and compliance requirements from production support perspective.
- Effectively communicating technical solutions to non-technical stakeholders, ensuring clear understanding and resolution issues
- Analysis and troubleshoot application issues with precision, ensuring accurate diagnoses and long-term solutions

Talent pool: c. 10

Experience: only Experts

Availability: Q4 2025

Zoom at: **Infrastructure Engineer**

Role overview:

An Infrastructure Engineer designs, implements, and maintains an infrastructure to ensure it runs smoothly and securely. They work on everything from setting up hardware and software to automating tasks and ensuring cybersecurity measures are in place. Their goal is to create a stable and efficient environment for all operations.

Expertise:

Technical knowledge of infrastructure layers on-prem, cloud and hybrid solutions. Broad knowledge of server setup, network configuration, operating system, virtualisation, containerization, cloud, database, storage and middleware. Good knowledge of Cloud Services Proficiency, Automation and Orchestration, Continuous Integration/Continuous Deployment (CI/CD).

Role specific knowledge & skills:

They are proficient in operating systems administration like Linux (RHEL) and Windows. Database administration like Oracle and PostgreSQL. Familiar with virtualization technologies like VMware and Hyper-V and containerization like Kubernetes and Docker. Enterprise Platform management including Servers, Backup, Storage and SAN.

Technical Competencies:

- Docker, Kubernetes,
- VMware and Hyper-V,
- Windows Servers 2012, 2016, 2019, 2022,
- RHEL 8.0,
- Strong proficiency with AWS services EC2, S3, CloudWatch, Lambda, RDS, IAM, EKS,
- Ansible, Terraform, Jenkins,
- Oracle, PostgreSQL.

Talent pool: c.10

Only Experts

Availability phased across Q3 2025 and Q1 2026

Zoom at: **Infrastructure Engineer**

Examples of project experience:

Providing solutions for applications hosting infrastructure to ensure scalability, stability, security and availability for business use as per agreed service level expectations. Collaborating with and influencing colleagues and stakeholders across the bank and third-party suppliers on the area of specialist knowledge service, ensuring the timely delivery of solutions which support the business.

Certificates

- AWS Certified SysOps Administrator
- AWS Certified Solutions Architect
- AWS Certified Cloud Practitioner
- Configure Secure Access to your Workloads using Azure virtual Networking
- Configuring Azure Virtual Desktop for the Enterprise
- Windows Server 2019 Hybrid and Azure IaaS

Capabilities/Soft Skills:

- A good understanding of Agile methodologies paired with working knowledge of the Agile toolsets and experience of working in an Agile team
- DevOps Integration
- Good stakeholder management and communication skills

Zoom at

Change Management Roles

Zoom at: Business Analyst

Role overview:

Performing complex, cross-franchise requirements analysis that includes capturing, validating and documenting both business and system requirements while confirming their alignment to key strategic principles. Building, managing and maintaining a positive working relationship with stakeholders and third-party suppliers across multiple franchises and functions.

Expertise:

- Supporting complex cross-franchise and group-wide requirements analysis.
- Investigating and interpreting large data sets.
- Identifying wider business impact across key outputs and processes.
- Conducting and supporting feasibility studies and options analysis

Technical Competencies:

- Applying various business analysis tools and techniques.
- Experience in technology projects incl.: software development and implementations.
- Analysis for business transformation and process migrations

Role specific knowledge & skills:

- Internal change framework based on Waterfall methodology with Agile elements acumen
- Specialist knowledge in a particular area
- Strong stakeholder management skills
- Ability to communicate complex technical concepts clearly to peers and management level colleagues
- Certification such as Agile BA or BABOK

Talent pool: ~51

Experience: Mostly Expert (5+ years): 47%

Availability: (Q4 2024 - Q1 2026)

Zoom at: **Business Analyst**

Responsibilities/tasks:

- Producing business requirements to inform future state design, and supporting teams in understanding the requirements and their linkages to the overall strategy
- Working across teams and stakeholders to capture, validate and document business and system requirements, ensuring they are in line with key strategic principles, and translated from business operations, business objectives, or from external requirements
- Tracing and linking business requirements to future state design
- Creating and executing test scenarios and test scripts at various stages of the project in order to validate the solution design
- Facilitating user acceptance testing and support business users in executing the user acceptance testing
- Supporting others to articulate the ideas and requirements in the format required by the team, such as use cases, user journeys, user stories and illustrations

Examples of project experience:

Supporting the identification of solutions that deliver value to stakeholders and lead in the definition and realisation of solutions, processes, benefits, avoidance of cost, identification of new opportunities, understanding of required capabilities and modelling the organisation.

Professional skillset:

- Holding an appropriate Business Analyst
- Certification such as Agile BA or BABOK

Capabilities/Soft Skills:

- Attention to detail.
- Good communication skills with the ability to proactively engage with a wide range of stakeholders.
- Highly analytical mindset, with strong organisational skills and the ability to prioritise work

Zoom at: Project Management Officer (PMO)

Role overview:

Setting and maintaining project standards in line with internal framework which includes improving the planning and delivery process by collecting and maintaining data in a consistent form; supporting the project governance and control including tracking the performance and progress of projects and project financial control together with adoption.

Expertise:

- Project, programme and portfolio analytics
- Supporting the project governance and control
- Complying with business-wide change standards
- Implementation of good programme and project management practice
- programmes and project monitoring
- Experience of project support roles
- Assurance of project related tasks in order to comply with organisation's quality standards

Technical Competencies:

- Expertise in tools such as MS Office, Planview, Oracle, SharePoint
- Basic knowledge of Jira and Confluence
- Certified with House of PMO

Role specific knowledge & skills:

- Knowledge of project types and the project lifecycle
- Internal change framework based on Waterfall methodology with Agile elements acumen
- Knowledge of Prince, Agile PM, P3O methodologies
- Knowledge of organisational processes and procedures, including risk frameworks

Talent pool: ~6

Experience: Mostly Experts

Availability: (Q4 2024 - Q1 2026)

Zoom at: **Project Management Officer (PMO)**

Responsibilities/tasks:

- Developing guidelines, procedures and templates to collect and maintain consistent data, and provide hands-on delivery support to a programme or project
- Portfolio management and analysis
- Supporting with the creation and update of programme or project plans as required by the programme or project manager
- Supporting the identification of where cross-project dependencies exist and track or monitor these in support of the manager
- Supporting management in the implementation of agreed regular progress reporting mechanisms for all projects and thereby monitor routine progress of projects, and assist in the preparation of the programme status or project highlight reports
- Establishing and maintaining an information management system, managing configuration libraries

Examples of project experience:

Experience of project support roles internally or externally, and knowledge of project types and the project lifecycle.

Professional skillset:

- Expertise in tools such as MS Office, Planview, Oracle and SharePoint
- Knowledge of organisational processes and procedures, including risk frameworks
- Knowledge of configuration management
- Basic knowledge of Jira and Confluence

Capabilities/Soft Skills:

- Attention to detail.
- Strong interpersonal and communication skills
- Problem Solving
- Critical Thinking
- Adaptability

Zoom at: **Project Manager**

Role overview:

End to end Project Management, planning, designing, executing and monitoring every aspect of a specific project. Coordination of activities across cross-functional teams (Poland, UK and India), risk & finance management and work with stakeholders to deliver successful project outcome.

Project Manager Persona:

- Empowering and leading the team through the project lifecycle, setting team member objectives, carrying out regular individual assessments and formal appraisals alongside our performance management framework
- Supporting capability development and make sure that succession plans are in place
- Delivering the project scope within time, cost, quality and management of the associated risk profile

Role specific knowledge & skills:

- Agile and Waterfall Delivery
- Delivering strategic projects that support growth agenda
- Certified project management qualifications
- Acustom to flexible working environments

Talent pool: ~12

Experience: Experts

Availability: (Q4 2024 - Q1 2026)

Experience (Technical Compentencies)

Experience of delivering projects in a several areas such as : technology, business transition, property, events, legal & regulatory, marketing and branding projects.

Zoom at: **Project Manager**

Track Record:

- Software Development – internal and bankwide business applications (duration: 6 to 12 months, team size: >10 FTE, User size: 50 – 1000FTE, Enviroments: local and cloud hosted)
- Tech Infrastructure – set up, migration, moderanization & upgrade
- Business Transitions – process transitions across different geographical location (FTE size: 10 to 200, duration: 3 to 18 months)
- Transformation – Bankwide system in the following areas: HR, Finance, Supply Chain Services
- Property & Procurement – Office fit out (renovation and adjustment to new ways of working), Property sale, Property lease, co-working space set up
- Event Management- Internal and External (e.g: Fight FinCrime Forum, LGBT+ Diamonds Awards, Women in Tech Summit)
- Legal & Regulatory – Entity set up, Entity branch winddown, Entity merger, GDPR, Assets Transfer between branches
- Business Optimisation – New Ways of working, process automation, Hackaton, Employee re-skilling & development programme
- Managing the end-to-end delivery of bank web applications utilizing the latest technologies with Snowflake, Java, AWS, Oracle, Teradata as the main ones
- Leading on new people/infrastructure/design initiatives to create a cutting-edge software development environment within the bank that matches industry standards and adds value to the banks customers and processes

Professional skillset:

- Project Management: Prince 2, Agile PM, Agile SaFe
- Scrum.org Certified: PSM1 (Professional Scrum Master), PSPO (Product Owner), PAL (Professional Agile Leadership)
- Project Management Software Know How: MS Teams, MS Project, PlanView, Service Now, Jira & Confluence,

Capabilities/Soft Skills:

- Leadership, Communication and Problem solving
- A collaborative approach and the ability to build productive relationships with stakeholders, colleagues and senior managers
- Strong organisation skills
- Experience in working in cross culture and flexible environment.

Zoom at: **Project Manager**

Responsibilities/tasks:

- Identifying, tracking, managing and mitigating any project risks, assumptions, issues and dependencies
- Leading and defining the production of a project initiation document and making sure that the solution clearly supports and is aligned to strategic goals
- Analysing the appropriate statements and preparing estimates for approval
- Supporting the creation of a financial business case
- Tracking and reporting project costs and making sure that the project is completed in allotted budgets
- Making sure that all project deliverables satisfy the requirements and that they adhere to the agreed governance framework
- Empowering and lead a team through the project lifecycle, setting team member objectives, and carrying out regular individual assessments and formal appraisals.
- Preparing and taking ownership for all project plans, controls and resource plans
- Preparing, analysing and providing reporting on all project plans, controls and resource plans and making sure that the plans are in line with any wider programme plans and controls

Specific Tasks

In many organizations, while not always performed by key roles, there are tasks which play a significant part in the overall operations cycle of the company. Such tasks and its importance cannot be underestimated, and the skillset related to its execution should be additionally highlighted.

Therefore, as a response to market demand there are prepared detailed descriptions of specific activities performer by NatWest Poland employees.

Modelling

Zoom at: Modelling

Across the organisation there are experts divided among various teams who perform tasks related to building, running, validating and back testing various types of models.

Working with CCR (counterparty credit risk) Models: Performing simulations, modelling of collateral, and calculations of credit-related quantities such as EAD – and testing their output by setting up and analysing tests which modify their behaviour.

Assisting other teams involved in modelling: performing backtesting and statistical investigations

Building and Running statistical / econometric models in order to project the bank's balance sheet and income stream.

Model Development and Validation: Oversight on model assurance activities performed by model development teams for organisation-wide pricing models. Deliver of high quality reviews (initial validations, periodic and ad-hoc re-validations, periodic reviews). Development of programming libraries for pricing model validation purposes.

Zoom at: **Modelling**

Modelling related knowledge & skills:

- Math expertise at PhD level
- General economics / finance / banking industry knowledge
- Complex derivatives pricing (SPD, rates, xVA, credit, FX, eFX) methods
- Understanding machine learning and AI models
- Financial knowledge of CCR, in particular collateral modelling,
- OLS regression / Logit regression
- Panel data regression
- ARDL regression
- Principal Component Analysis (PCA)
- Time series modelling (ARIMA / ARMA)
- Various classification models (e.g., Decision Trees, XG Boost etc.)
- Monte Carlo simulations
- Hypothesis testing and model diagnostic tests running.
- Back-testing

Technical Competencies:

Python, C++, Latex, R programming for validation libraries building, Git solution, GitLab, Cloud solutions, Understanding machine learning and AI models, R, AWS, PySpark, E-views, Tableau, SQL, SAS EG, VBA, JIRA, PyCharm, Oracle business objects, Visual studio

Soft skills

- leading or co-leading expert panels
- model risk team engagement
- managing the regulatory side by writing reports and meeting with members of the Prudential Regulation Authority
- project management
- structured trainings delivery
- pioneering and high level of independence
- strong verbal and written communication skills
- presenting the work results to stakeholders
- time management
- working under time pressure
- ability to focus despite changing tasks.
- working on unstructured tasks
